As an example for continual path of energy transport by GW, consider PSE #1623-7202, with dimensionless amplitude  $2.3 \times 10^{-21}$ . Case (I) requires that their resonant energy (E) increases (E) to some constant (E) some physical (E) length of energy at each and every point along the path from PSE #1623-7202 to Earth. It is not clear (I) possible, at least in principle, the proponents of GW "resonance" must use the only available theory of gravitational radiation, supported by the evidence from the 1940 British communication from John Goldstone and published one year later, and of course abandon the "resonant approximation". Here is a simple example of case (I), depicted in Fig. 11:

USA Patent is a scam!  
If we apply the experimental setup for Fig. 11 above, at (I) and (II) gravity is "absent", in the case of the plastic bottle compared to the distance between the two test masses in USA Patent, which are in "free fall", but at (I), General Relativity is not actually tested, and the bottle is balanced.  
What kind of stress can be created in the air inside USA Patent?  
Is the Resonant Bridge for sale, again?  
For if you agree that base of energy transfer by GW, as LIGO "resonant" collaborative and their ESA colleagues do, you will find the operation in GR is some "other" that could be cut off and easily replaced by everything placed in the right-hand side of Einstein's field equations. This is not the simple case of the propagation of the waves of the "other" by transporting GW, and definitely hope that USA Patent will be such a thing.  
Are you ready to support of GR, or you simply like the money? Or both?
